

# Resin Art Gift Pack

## Application Guide

Glacier Pink

It's so easy to create a resin art masterpiece using Eli-Chem MasterCast Art Resin, coloured tints and metallic pigments. Simply follow the step by step instructions below and get creative!

### Prepare

Balance your canvas or art board on upturned cups and use cardboard or plastic to catch the drips. If using a canvas make sure it's level to avoid slumping.

STEP  
1

### Combine

Pour equal parts of resin and hardener into the large measuring cup, the 1:1 ratio by volume of MasterCast makes this simple and ensures the resin cures perfectly.

STEP  
2

### Mix

Stir the mixture for at least 3 minutes, making sure you scrape all the liquid from the sides and bottom of the jug to ensure thorough mixing.

STEP  
3

### Split

Pour small amounts of the mixed MasterCast resin into each of the 4 small cups provided in the kit.

STEP  
4

### Tint

Add the resi-tint MAX to the resin in the small cups one drop at a time.

They are very concentrated so you only need a small amount per cup. The resi-TINT+ Metallic Powder can be added to one of these colours or sprinkled lightly over your artwork whilst it is wet.

STEP  
5

### Pour

Pour the cups of tinted resin onto your board one at a time, making sure you cover all areas. Overlap colours if creating cells & lacing. The resin will flow out to fill any blank areas but if you notice any uncovered areas you can tilt the board to cover them.

STEP  
6

### Bubbles

Bubbles naturally occur in the mixing process, these can be dispersed by playing a heat gun on the resin at a distance of 30cms. The heat will also accentuate the lacing effect of the resi-BLAST.

STEP  
7

### Admire

Stand back and admire your masterpiece! Cover your resined piece with an upturned box to protect it from dust as it cures. The resin will be touch dry in 6-7 hours and fully cured in 24 hours.

STEP  
8
