

# Resin Art Gift Pack Application Guide

## Hi-Build Monochrome

It's so easy to create a 3D masterpiece using Eli-Chem Hi-Build Art Resin and coloured tints. Simply follow the step by step instructions below and get creative!

### Prepare

Balance your canvas, art board or surface on upturned cups and use cardboard or plastic to catch the drips. If using a canvas make sure it's level to avoid slumping.

**STEP 1**

**STEP 2**

### Combine

Pour equal parts of Hi-Build resin and hardener into the large measuring cup, the 1:1 ratio by volume of Hi-Build makes this simple and ensures the resin cures perfectly.

If it's too gloopy to measure properly, simply pre-warm the containers by placing in hot water to lower the viscosity.

### Mix

Stir the mixture for at least 3-4 minutes, making sure you scrape all the liquid from the sides and bottom of the cup to ensure thorough mixing.

**STEP 3**

**STEP 4**

### Split

Pour small amounts of the mixed Hi-Build resin into each of the 2 small cups provided in the kit. If you have bought a top up pack of pigments simply add more cups and split the Hi-Build between all the cups.

### Tint

Add the resi-tint MAX to the resin in the small cups one drop at a time. They are very concentrated so you only need a small amount per cup.

**STEP 5**

**STEP 6**

### Pour

The product can then be dropped onto the surface to create domed 3D shapes or lines. The resin pour is more controllable if you drop using a plastic spoon

### Admire

Stand back and admire your masterpiece! Cover your resined piece with an upturned box to protect it from dust as it cures. The resin will be touch dry in 6-7 hours and fully cured in 24 hours

**STEP 7**

An application video for Hi-Build resin can be seen on our website along with design ideas and inspiration for colours.
