

Case Study No. 4 - Coating Acrylic Paintings using Multipurpose Clear Epoxy Resin

The Resin is a two-part, UV stable, Clear Epoxy Resin supplied by Eli-Chem Resins Ltd

Mixing ratio is 2:1 by volume, mixing time is 3-4 mins until uniform colour and streak-free

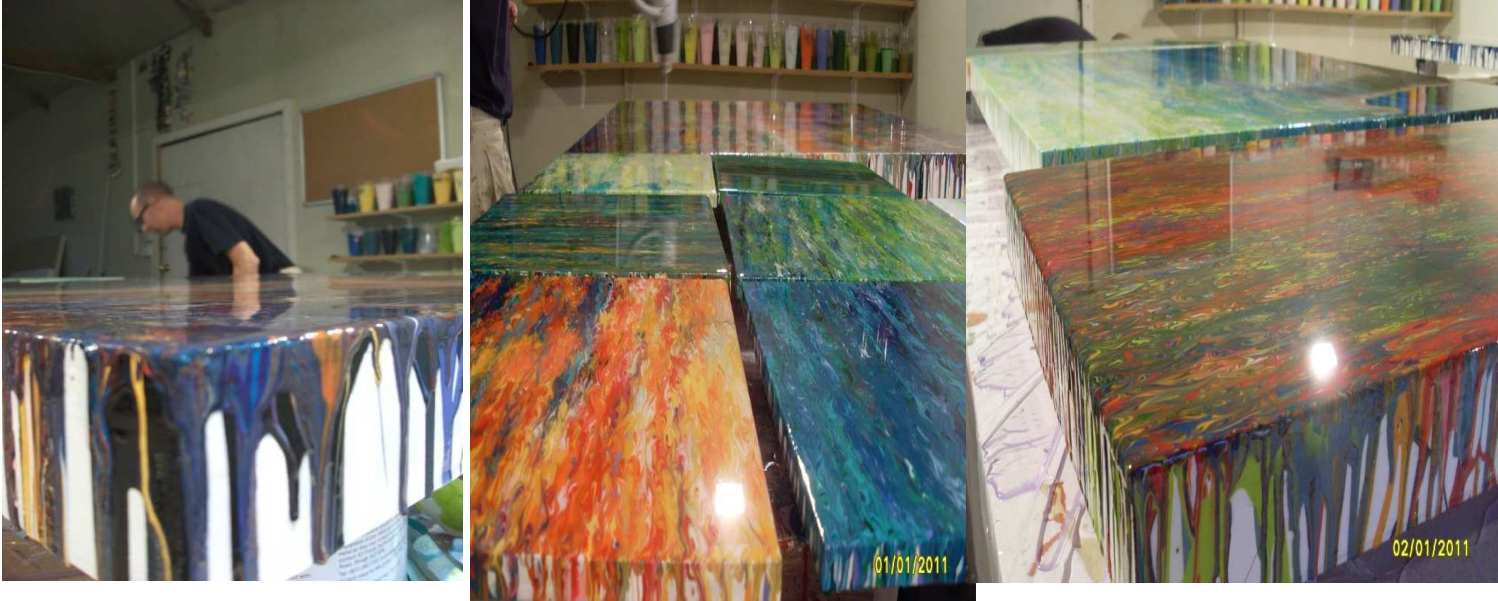

The application is by pouring - resin is medium viscosity and self-levelling.

Any mixing bubbles can easily be removed by blowing hot air across the resin surface

Although touch dry after a few hrs, the finished article should be left to cure fully (12 hrs)
