

Product Data Sheet:

Resi-TINT

Acrylic Resin Art Pigments

29.5ml

Resi-TINT acrylic art pigments work perfectly with our range of clear art resins. A tiny amount is required (approximately 1 part pigment to 1000 parts resin) to transform your resin art with vibrant colour.

- Acrylic ink formulation
- Permanence – all colours are 3* except Black which is 4*
- Water resistant
- Available in 18 colours
- Concentrated formula
- Supplied in 29.5ml bottles

HOW TO USE:

Application

Resi-TINT bottles come with an integrated glass dropper enabling you to control the amount of colour you want. The water-resistant tints have a much superior resistance to fading than conventional dyes and colouring agents. The range of 18 colours have a 3- or 4-star rating for permanence. Such a high degree of colour fastness over such a range of fully inter-mixable colours makes them ideal for use by artists in the production of paintings/sculptures for permanent display.

Resi-tint can be diluted to achieve subtle tones, very similar to watercolour paints. These washes will dry to a water-resistant film on virtually all surfaces. Subsequent layers of colour can be overlaid to create beautiful effects.

The pigments used in this range are ground to a very small particle size (smaller than a grain of soot) so will pass through fine-line nozzles when airbrushing. They can also be used with brushes, dipper pens or simply by adding drops of pure colour using the integrated dropper

SAFETY:

Refer to the Material Safety Data Sheet for information on correct handling and application of the product.
